# AUTOMOX

Automox Worklets™

Create, automate, and enforce custom tasks in minutes

What does the average IT environment look like today? Generally, it's a lot of devices, a lot of operating systems, tons of tools, and not enough people to keep everything running securely. The outcome usually requires extra work and tool-specific knowledge to manage everything.

Empower your ITOps to take their time back with Automox Worklets. Eliminate manual tasks across all your endpoints (regardless of OS or location) and improve your endpoint security posture and compliance. With Automox, there's no need to spend hours combing through audit spreadsheets or applying fixes manually.

SLASH COST AND COMPLEXITY

Simplify actions by eliminating time-consuming tasks while consolidating tools and removing legacy dependencies, like VPNs.
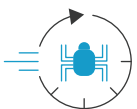

- Eliminate configuration drift
- Consolidate tools

TAKE YOUR TIME BACK

Easily automate tasks with pre-scripted Worklets that automate soul-crushing, manual tasks, and reduce burnout for IT and security teams.

- Simplify IT and security workflows
- VPN-free automation

REDUCE CYBER RISK

Improve your security posture through targeted configuration and vulnerability remediation.

- Deploy and remove software
- Find and fix vulnerabilities

HOW IT WORKS

Automox Worklets are script-based units of work that consolidate your tooling and automate work – from configuration, vulnerability remediation, provisioning, and other routine and repetitive tasks across Windows, macOS, and Linux. Worklets save money, reduce cyber risk, and save your IT team members time (and their sanity).

Leverage our catalog of pre-built Worklets or customize them for your unique environment to strengthen endpoint security controls and meet compliance standards without breaking a sweat.

Create
Search the Worklet Catalog* for pre-built automations. Or build your own bespoke automation in PowerShell for Windows or BASH for macOS and Linux.
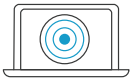

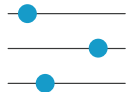

Target
Target your automation by device groups or attributes like IP address, OS version, or Active Directory Organizational Unit.

Evaluate
Leverage BASH or PowerShell scripts to evaluate targeted devices at device scan to only remediate when necessary.

Remediate
Run BASH or PowerShell scripts to automatically configure, fortify, or provision devices. Call attached files or other APIs to accomplish more complex use cases.

Schedule
If desired, schedule your Worklet to automatically prevent drift and save time.

Notify and Reboot
If your automation requires a reboot to take effect, keep your users in the loop with custom notifications and configurable reboot deferrals.

* The Worklet Catalog consists of pre-made automations authored by the Automox team. Worklets created by Automox customers can be found in the Automox Community.

ALL YOUR ENDPOINTS. ALWAYS CONFIGURED. **ALWAYS SECURE.**
VPN-free IT operations for modern organizations.
